PROFESSIONAL SUMMARY

Software Engineer with a Front-End focus and 8 years of experience building web applications. Specialized in React, Next.js, TypeScript, and front-end architecture, with a track record of defining technical solutions, modernizing systems, and driving the architectural evolution of 30+ products.

I work end-to-end, from solution design, collaborating with UX and prototyping thanks to my background in Digital Design, through implementation, testing, and production support, always balancing scalability, performance, and developer experience.

PROFESSIONAL EXPERIENCE

Software Engineer (Front-end) — Luizalabs

Oct 2019 — Jul 2026

Joined as a Jr. Systems Analyst and, within a year, took on growing architecture and technical leadership responsibilities.

- Served as technical reference for web application development using React, Next.js, and TypeScript, supporting architectural decisions and technical evolution across products, not only for my own team but for other teams running their own projects.
- Led the vertical's first migration to a Micro Frontends architecture (Module Federation and Single-SPA), setting the reference later adopted by 3 other core applications in the vertical, enabling independent deploys and greater team autonomy.
- Established development standards, contributed to front-end architecture decisions, led code reviews, and mentored 5+ developers with no prior front-end experience until they became technical references.
- Adopted GitHub Copilot in the daily development workflow, gaining roughly 40% productivity on boilerplate, testing, debugging, and code review — time redirected toward architectural decisions and technical mentoring.
- Reduced page load time on critical pages from ~3s to ~700ms through lazy loading, memoization, code splitting, and bundle optimization.
- Cut test pipeline runtime from ~15min to under 5min using mocks and React Testing Library optimizations, ensuring consistent execution across critical pipelines; later adopted by other squads and validated by the responsible tech lead.
- Contributed to the evolution of CI/CD pipelines and code quality using tools such as lefthook, Biome, SonarQube, and commit-lint, consistently reinforcing code quality standards.
- Occasionally took on back-end tasks in Java (endpoints, use cases, refactors) during periods of lower front-end demand, with a high code review approval rate.

Web Developer — Cast Group

Sep 2018 — Oct 2019

- Built corporate web applications using Angular, HTML5, CSS3, Bootstrap, and jQuery for large clients, working on projects for internal systems at Caixa Econômica Federal (Brazilian federal bank), highway systems for INVEPAR, and DATASUS (Brazil's public health system, SUS), among others.
- Implemented an internal base project defining front-end architecture, code organization, and technical standards, later reused across 4 new projects.
- Contributed to defining front-end development best practices, architecture, accessibility, and CSS organization using the BEM methodology.
- Collaborated on UX research and interface prototyping, bridging design and development during new product conception.

EDUCATION

Digital Design — Uniara

2018-2021

Started in Computer Science (Systems Analysis and Development) at FATEC Taquaritinga (2016–2018) and transferred to Digital Design, aiming to combine a technical foundation with a product and UX perspective.

TECHNICAL SKILLS

Languages: TypeScript • JavaScript • Java • SQL

AI-Assisted Development: GitHub Copilot • Claude Code • Spec-Driven Development (ASDD) • Context Engineering (CLAUDE.md, agent files)

Front-end: React • Next.js • HTML5 • CSS3 • Tailwind CSS • Material UI • Styled Components

Back-end: Node.js • NestJS • Express • REST APIs • WebSockets

Architecture: Micro Frontends • Module Federation • Single-SPA • Design Patterns

Performance: Code Splitting • Lazy Loading • Bundle Optimization • Memoization

State Management: Redux • Redux Toolkit • Zustand • MobX • TanStack Query

Testing: Jest • Vitest • React Testing Library

DevOps: Docker • GitLab CI/CD • GitHub Actions

Tools: Webpack • Vite • Git • SonarQube • ESLint • Biome • Storybook

Databases: PostgreSQL • MySQL • MongoDB • Redis • Prisma • Sequelize

UX & Design: Figma • Prototyping • Wireframes • Design Systems

LANGUAGES

Portuguese — Native

English — Fluent
